

DocMark Font Test Document

This document tests whether the Inter font family is properly embedded in PDF exports from DocMark.

Font Weight Variations

Weight 300 (Light): The quick brown fox jumps over the lazy dog.

Weight 400 (Regular): The quick brown fox jumps over the lazy dog.

Weight 500 (Medium): The quick brown fox jumps over the lazy dog.

Weight 600 (Semi-Bold): The quick brown fox jumps over the lazy dog.

Weight 700 (Bold): The quick brown fox jumps over the lazy dog.

Weight 800 (Extra-Bold): The quick brown fox jumps over the lazy dog.

Weight 900 (Black): The quick brown fox jumps over the lazy dog.

Technical Details

Font family: `Inter` from Google Fonts

Loading method: `<link rel="stylesheet">` tag

Server wait strategy: `networkidle0` + `document.fonts.ready`

Expected Results

If fonts are properly embedded:

- PDF file size should be ~50-70 KB (includes font data)
- All text should render in Inter font family
- Different font weights should be visually distinct
- Text should look identical to the HTML preview

If fonts are NOT embedded:

- PDF file size will be ~10-15 KB (no font data)
- Text will render in system default font (Arial/Helvetica)
- Font weights may not display correctly
- Visual appearance will differ from HTML preview
